

PATINA INLINE

Patina Inline is a through coloured fibre cement panel with a linear milled surface structure. The indentations create an atmospheric play of shadows, which changes depending on the time of day and viewing angle. A fine patina will form on the surface over time.

The restrained colours, which range from white to beige to a dark grey, create a stylish harmony in combination with the milled surface.

P 070

Technical data

The panel is coloured through with linear milled structural grooves. This gives the building a unique 3D effect and a dynamic appearance. The panel surfaces are hydrophobized on all sides.

Maximum usable format 3050 x 1250 mm, panel thickness 9,5 mm

For a detailed summary of the sizing and color options, please refer to our delivery program.

Colours

5 standard colours. Deviations in the colour shades of the different panels are a natural part of the production properties underlining the vibrant character of the material.

Mounting

Visible on wooden substructure: Screws with painted heads

Visible on metal substructure (aluminium or steel): Blind rivets with painted heads

Technical data

Detailed information can be found in the DIM - "Design and Installation Manual".
